

## ***Consumption correction***

from version 2.00 the internal basic value of the consumption calculation was raised for gasoline to **+50%**.

After the update on V2.00, therefore correction value of consumption used so far must be changed!!!

### Calculation for gasoline-driven cars:

The past correction value amounts to +71%

After the update must be entered as new value +14%, in order to get the same value consumed indicated.

$$\begin{aligned} & (\text{old correction value} - 50\%) / 1.5 = \text{new value} \\ & ( +71 - 50\% ) / 1.5 \\ & ( 21\% ) / 1.5 = 14\% \end{aligned}$$
